OPG's DARLINGTON ENERGY COMPLEX WOWS THOUSANDS

World-Class Nuclear Refurbishment Training Facility Opens Doors to Public

Clarington – Ontario Power Generation's (OPG) Darlington Energy Complex welcomed about 3,500 awestruck and appreciative visitors on Nov. 4, 5 and 8. The public were invited in to see the full scale mock-up of a replica nuclear reactor for training and tooling development.

"We're thrilled to have hosted so many people this past week", said Dietmar Reiner, OPG's Senior Vice President, Nuclear Projects. "The Darlington Energy Complex is an innovative training facility that features a made-in-Ontario mock-up reactor. All workers will be fully trained and tools will be fully tested before anyone works inside a Darlington reactor. This will ensure that refurbishment of Darlington is a success."

OPG's Darlington Nuclear Generating Station is one of the top nuclear plants in the world, and has been internationally recognized for its safety and performance. The four Darlington reactors provide enough power for about two million homes, or enough electricity to supply the City of Toronto. Refurbishment will provide 30 additional years of clean, low-cost, reliable power for the province. Investing in refurbishment will create thousands of jobs and positive economic benefits across Ontario

The refurbishment is scheduled to start in the fall of 2016. To learn more, visit:
