**Stage 4 Archaeological Mitigative Excavation  
of the Brady Site (ALGq-83)  
New Nuclear – Darlington Environmental Assessment  
Part of Lot 18, Broken Front Concession  
Geographic Township of Darlington  
Regional Municipality of Durham, Ontario**

**EXECUTIVE SUMMARY**

Archaeological Services Inc. (ASI) was retained by Ontario Power Generation Inc. (OPG) to conduct a Stage 4 archaeological mitigation of the Brady site (ALGq-83), located within Lot 18, Broken Front Concession, Geographic Township of Darlington, Regional Municipality of Durham, Ontario. The Stage 4 mitigative excavation was completed in November 2010 under the senior project management of Robert Pihl and the project and field direction of Ms. Denise McGuire (MTC CIF P315-029-2010).

It was concluded from the Stage 3 assessment that the cultural heritage value of the Brady site (ALGq-83) was significant as it comprised the extensive remains of a Euro-Canadian farmstead occupied during the first half of the nineteenth century. A Stage 4 mitigative excavation was recommended to mitigate the impact of development on the site, beginning with the hand excavation of the midden located in the plough zone. The site is located within an area to be redeveloped and cannot be protected in the context of current plans. The excavation was part of an ongoing process under the *Canadian Environmental Assessment Act* that is preceding construction of a new nuclear power generating station at OPG's existing Darlington facility.

During the Stage 4, 462 one-metre square units were block excavated in the midden until artifact counts dropped below 90, or excavation was halted due to safety concerns. Next, 2,000 square metres of the plough zone were mechanically removed by a Gradall equipped with a smooth bucket. This revealed four cultural features consisting of one root cellar and three refuse pits. All of the features were 100 percent excavated.

In total, 63,602 Euro-Canadian and pre-contact artifacts were recovered from the Brady site. With respect to the latter, the formal tools and flaking debris are indicative of an ephemeral Aboriginal campsite dating circa 6,000 to 4,000 BCE. All Aboriginal communities with an interest in the New Nuclear – Darlington project were informed of the discovery of the Aboriginal pre-contact artifacts and representatives from three First Nations attended an on-site briefing and site visit associated with the findings. With respect to the historic material, the Euro-Canadian artifacts and features represent a typical nineteenth-century domestic site. The spatial analysis performed on the artifact distribution within the plough zone paints a vibrant picture of the landscape around the farmstead while the artifact assemblage suggests that the occupants of the site were fairly affluent and were strongly connected to the dynamic global market economy of the period. Therefore, this site is a valuable heritage resource that furthers the understanding of early settlement and life in Darlington Township.

This report represents the fulfillment of our 2010 licensing agreements with the Ontario Ministry of Tourism and Culture and the statements contained on CIF # P315-029-2010 (McGuire). It is concluded that the Brady site (ALGq-83) has been sufficiently excavated and documented and no further concerns exist for this archaeological site. In a letter dated January 19, 2011 the Ministry concurred that the provincial interest in the Brady site (ALGq-83) had been addressed and was satisfied that concerns for impacts to the archaeological site have been met in the development area.

Figure B - 2: The Brady Site (ALGq-83) Within the Proposed Development Area

## 1.0 PROJECT CONTEXT

### 1.1 Development Context

Archaeological Services Inc. (ASI) was retained by Ontario Power Generation Inc. (OPG) of Pickering, Ontario to conduct a Stage 4 mitigative excavation of the Brady site (AIGq-83) located on part of Lot 18, Broken Front Concession, in the Geographical Township of Darlington, Regional Municipality of Durham (Figure 1). The excavation was part of an ongoing process under the *Canadian Environmental Assessment Act* that is preceding construction of a new nuclear power generating station at OPG's existing Darlington facility.

The project was conducted under the senior project management of Robert Pihl (P057), project management of Ms. Eva MacDonald (P125), and project and field direction of Ms. Denise McGuire, under archaeological licence P315 issued to Ms. McGuire (MTC CIF # P315-029-2009) in accordance with the *Ontario Heritage Act* (RSO 1990), and as required by the *Canadian Environmental Assessment Act*. All activities were completed in accordance with the terms of the Ministry of Tourism and Culture's 1993 *Archaeological Assessment Technical Guidelines* (MTC 1993).

Mrs. Marianne Leung of Ontario Power Generation Inc. granted Archaeological Services Inc. permission to enter the property and carry out the necessary activities for the completion of the Stage 4 mitigative excavation on September 23, 2009. The following report includes the study background, contextual history, field methods, analysis, discussion, and recommendations as a result of the excavation of the Brady site (AIGq-83).

Appendix A contains the artifact catalogue of all the cultural material recovered by Archaeological Services Inc. as a result of this project. Appendix B contains a list of all the files, maps, and notes related to the project as well as more detailed information about the site's location, including its location within the geographic Township of Darlington (Figure B-1).

### 1.2 Historical Context

In order to place the archaeological site within the context of historical land use, research was conducted at the Ontario Archives. The land in Darlington Township was originally granted to absentee owners connected to the governing elite at York which hindered the progress of settlement within the township (Mika and Mika 1977:521; Squair 1927:54). Even the construction of Danforth and later Kingston Road built in 1798 and 1815-16 respectively, did not facilitate quick settlement as the roads were poorly built and maintained in their early years (Belden 1878:iii). So despite the advantages of good arable land and proximity to the capital, population grew slowly in the township with the earliest settlements being located near the lake on the Broken Front and First Concessions for easy access to York. It was not until the 1830s that extensive settlement of the township took place after improvements to the local infrastructure (Squair 1927:56).

According to the Abstract Index to Deed Titles, the Crown patent for Lot 18 in the Broken Front Concession, comprised of 250 acres, was issued to Marianne White on May 1, 1799. White was born in England and came to Upper Canada in 1792 with her husband, John White, who was appointed attorney general of Upper Canada. On December 20, 1797, "at the motion of the President" Peter Russell, Mrs. White and her three children were each awarded 1,200 acres of land for a total grant of 4,800 acres,

including Lots 17 through 20 inclusive in the Broken Front Concession (Upper Canada Land Petitions, W3/146 and W7/19). Lot 18 passed through the hands of several land owners as an undivided whole until 1825 (Abstract Index to Deed Titles Darlington Township, GSU 197631). These owners included John Mills Jackson (sometime after 1806), Absalom Price (1816) and John Tucker Williams (1821).

While early censuses available for Darlington Township do not list the lot and concession, they do provide the names of families resident in the township. The surnames of Jackson, Price and Williams are absent from the 1803 and 1804 censuses, indicating that they were not among the first settlers to arrive at Port Darlington. The 1822 census, however, listed two families with the surname of Price. Luther Price's family consisted of one adult male, one adult female, and one male child, while Russell Price's family included one adult male, one adult female, one male child, and two female children. Again, no one with the surname of Williams or Jackson was listed in the 1823 census, but four families with the surname Price were recorded. Luther Price's family consisted of one adult male, one adult female, and one male child. Russell Price's family included one adult male, one adult female, three male children, and two female children. Samuel Price's family consisted of one adult male, one adult female, and two servants, and Trudy Price's family included two adult females, three male children, and four female children [AO, Darlington Township Assessments and Censuses, reel MS 16/3].

The first extant assessment roll to record the lot and concession is from 1822. Absalom Price was assessed for 500 acres on Lots 18 and 19 in the Broken Front Concession, 80 acres of which were cultivated. He was assessed for horses, oxen, and cows, but not for a dwelling house, therefore, his family still resided in a log cabin. His family size was not recorded. In 1823 and 1824, the amount of cultivated land remained 80 acres on Lots 18 and 19, but the household head changed to Samuel Price in 1823, and to Prudence Price in 1824, both of whom were listed in the 1823 census [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

The first sale of a portion of Lot 18 occurred in 1825, when the "east part" (75 acres) was purchased by Prudence Price. This east part corresponds to a narrow strip of land along the east boundary that extends between the north boundary to a distant point three-quarters the length of the lot. The 1825 assessment roll confirmed that activity was going to take place there as Prudence Price was assessed for 75 uncultivated acres on the east part of Lot 18. John Williams, who had purchased Lots 18 and 19 from Absalom Price in 1821, was assessed for the balance (425 acres on part of Lots 18 and 19), 80 acres of which were cultivated. Again, no dwelling houses were assessed [AO, Darlington Township Assessments and Censuses, reel MS 16/4]. It is unlikely that the parcel severed from the original 500-acre farm contained the Price family homelot as it did not contain any arable land; and all of the arable land remained with John Williams according to the 1825 assessment roll. It is probable that the parcel was intended to be a source of income for Prudence Price.

This "east" parcel was further subdivided in the 1830s when Nehemiah Price sold 62 acres to John Smith in 1832 and 10 acres to Elizabeth Bates in 1834. Smith in turn sold his property to Jesse Van Camp in 1834. The "west part" of Lot 18 (190 acres) was sold to Edward Reilly in 1826. In 1832, Edward Reilly further divided Lot 18 and sold 55 acres of the west part to William A. Baldwin. At an undisclosed later date Margaret Clark purchased 63 acres in the northwest part and Peter Brady purchased 65 acres on the south part of the lot.

Between 1827 and 1832, none of these owners' surnames were listed for Lot 18 on subsequent assessment rolls, and the assessments continued to link Lots 18 and 19 together making it difficult to discern whether the homelots were located on Lot 18 or Lot 19. For example, in 1827, William Preston farmed 165 acres on what was described as the south part of Lots 18 and 19, 85 acres of which were cultivated. His family consisted of one adult male, one adult female, three male children, and three

female children. No dwelling house was recorded. A different family was listed on the 1829 assessment roll and the size of the farm was reduced. John Wright was assessed for 150 acres on the south part of Lots 18 and 19, 70 acres of which were cultivated. His family included one adult male, one adult female, three male children, and one female child and no dwelling house was listed [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

The family name associated with Lot 18 reverted back to Price with the 1832 assessment roll. “N. B.” (Nehemiah) Price was listed for Lots 18 and 19 in the 1832 assessment. For the first time, a distinction was made between a 60-acre farm in the “central” part of Lot 18 where only three acres were under cultivation, and a 125-acre farm on the west part of Lot 19 where only 25 acres were cultivated. Price’s family included three adult males, two adult females, two male children, and two female children. On the 1833 assessment roll, N.B. Price was recorded again, but this time his 85-acre farm was located entirely on the “south” part of Lot 18, 30 acres of which were cultivated. His family consisted of two male adults, two female adults, one male child, and two female children. No dwelling house was recorded in either of the assessments [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

Two families were listed for Lot 18 on the 1835 assessment roll. Nehemiah B. Price farmed 65 acres on the “southeast” portion of Lot 18, 10 acres of which were cultivated. His family included one adult male, one adult female, and one child. Also listed for Lot 18 was the family of Peter Brady. Brady occupied 190 acres on the “west” part of Lot 18, 22 acres of which were cultivated. His family included one adult male and one adult female. Brady was again listed for Lot 18 on the 1836 assessment roll. He farmed 160 acres, described as the “west three-quarters” of the lot, of which 15 acres were cultivated. His family included one adult male, two adult females, one male child, and one female child. There were no dwelling houses recorded [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

Two families were listed for Lot 18 on the 1837 assessment roll. Isaac Metcalf occupied 120 uncultivated acres in the north part of the lot, which comprised the parcels sold to William Baldwin and Margaret Clark, and which would be purchased eventually by Metcalf in the late nineteenth century. The south 100 acres on Lot 18 was farmed by John Tait and 35 acres were cultivated. His family included two adult males, one adult female, three male children, and one female child. Two families were listed for Lot 18 on the 1839 assessment roll. Frank Francis farmed 110 acres on the north half, and Thomas Hawk farmed 60 cultivated acres on the south half of the lot. His family included one adult male, one male child, and one female child. Two families were listed for Lot 18 on the 1840 assessment roll. Frank Francis occupied 110 acres and Joseph Metcalf occupied 126 acres on the north part of the lot. Isaac Metcalf was the only person enumerated for Lot 18 in the 1841 census. He occupied 126 acres. No dwelling houses were listed [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

Beginning with the 1842 assessment roll, it would appear that Lot 18 was divided between three farms and this remained the case until 1847. Peter Brady farmed 60 acres, 30 of which were cultivated, Cam Hadden farmed 20 cultivated acres, and Isaac Metcalf farmed 126 acres. The general location of these farms was provided in the 1844 assessment, which listed Peter Brady with 63 acres in the “southwest” part of the lot, William Hadden with 30 acres in the “southeast” part of the lot, 20 of which were cultivated, and Asa Burk occupied the balance. No dwelling houses were recorded for any of these residents [AO, Darlington Township Assessments and Censuses, reel MS 16/4].

The 1847 assessment recorded two occupants for Lot 18. William Allen farmed 100 acres on the north part of the lot, while Peter Brady farmed 60 acres in the “southwest” part of the lot. No dwelling houses were recorded [AO, Darlington Township Assessments and Censuses, reel MS 16/4]. The 1848 assessment provides more detailed information than those conducted earlier. Two farms were listed for Lot 18, including the 62-acre farm of Peter Brady, of which 40 acres were in tillage, and 22 acres left

wild. The farm's crops included wheat, oats, and potatoes, while the livestock consisted of cows, horses, and hogs. Brady was a farmer who lived with one adult female, three females aged five years and under, one male aged between five years and 14 years old, and one female aged between five years and 14 years old. Two family members were born in Ireland, four were born in Canada, and one was born in the United States. No dwelling house was assessed, again indicating that the original log cabin had not been upgraded to frame, brick or stone [AO, Darlington Township Assessments and Censuses, reel MS 16/4]. The agricultural returns included with the 1852 census of Darlington Township also indicated that two farms were operated on Lot 18 in 1851, the 63-acre farm of Peter Brady and the 70-acre farm of John Colwell. Unfortunately, the personal portion of the census is no longer extant, and it is not possible to characterize the families or their dwellings at mid-century using the census.

Thus, it would appear that tenant farming operations on Lot 18 were fairly fluid, making it hard to track a farm of a fixed size over time through the assessment rolls. Not only do the farm sizes change, so does the amount of arable land per farm, and the terms used in the assessment rolls to designate on which part of the lot the farms were located. Also, the farms don't correspond to the parcels that were bought and sold during the first half of the nineteenth century. The tenant names were variable over time, and prior to 1832, Lot 18 was linked with Lot 19 so it is not known for certain if a homelot existed on Lot 18 before that time.

The reconfiguration of smaller parcels into distinct farms began in the 1850s with the sale of 50 acres of the east part of Lot 18 by Jesse Van Camp to William Poley in 1853. William Poley also purchased Peter Brady's land in 1860, such that Poley owned the 115-acre farm illustrated on the south part of Lot 18 on the Tremaine Map of Darlington Township. It is interesting to note that no structures were illustrated on Poley's farm in 1861, but by 1878, the *Illustrated Historical Atlas* did place his farm complex west of the Brady site (AIGq-83). Van Camp further sold 15 acres to Richard Foley in 1853 and Foley purchased 10 acres from Elizabeth Bates in that year, to create the small 25-acre farm in the northeast corner of Lot 18 also visible on the Tremaine map. Thus, the 1855 assessment roll listed five separate operations on Lot 18, those of Peter Brady, Richard Foley, Isaac Metcalf, William Poley, and Ira Van Camp.

To summarize the preceding information, the process of bringing the land on Lot 18 into agricultural production was started sometime after 1825 when 75 acres were severed from the 250-acre lot and sold to Prudence Price. Before that time, the ownership history of Lot 18 was tied to that of Lot 19, and it would appear that activity was concentrated on Lot 19. Early assessment rolls referred to the new severance as the "central" or "southeast" part, and it was farmed by Nehemiah Price until 1836. The balance was known as the "west three-quarters" even though it included the extreme south end that encompassed the Brady (AIGq-83) site. This "west" part was sold to Edward Reilly in 1826, but it was not until 1835 that an assessment roll distinguished a 190-acre farm on the west portion of Lot 18. Indeed, the 1835 assessment is the first one to note that two farming operations were extant on the lot, those of Nehemiah Price and Peter Brady.

With the departure of Price and Brady from the assessment roll in 1837, the distinction began to be made between farms on the north and south parts of Lot 18. Isaac Metcalf occupied 120 acres on the north part, none of which were cultivated, while John Tait occupied 100 acres on the south part, 35 acres of which were cultivated. Presumably Tait took over the arable land on Price's and Brady's farms, while Metcalf started a new operation. Thomas Hawk was listed as the tenant of the southern farm in 1839. Peter Brady returned to Lot 18 in 1842 and it is interesting to note that Lot 18 now contained three farm operations. The oldest areas of arable land, where Nehemiah Smith and Peter Brady had worked, continued to be farmed by the Hadden and Brady families, with a third farm being developed to the north by the Metcalf family. The Brady site (AIGq-83), therefore, is situated on a parcel of land that was within a large 190-acre farm put into agricultural production by the Irish immigrant Brady family circa 1835-36, and which

was briefly occupied by other tenants when the family was absent from the 1837-1841 assessment rolls. One wonders if the one American-born child in the Brady family was born during that four year hiatus. In 1842, the Brady family returned to Lot 18 and Peter purchased 65 acres. In 1860, Peter Brady sold this land and it was incorporated into a larger 115-acre farm.

### 1.3 Archaeological Context

The Brady site (ALGq-83) is one of two historical sites on Lot 18 of the Broken Front Concession that was registered in the Ontario Archaeological Sites Database as a result of the Stage 2 assessment of the New Nuclear – Darlington property. The site was discovered as a result of systematic test pit survey of a fallow field on a prominent bluff in the extreme southeast corner of Lot 18. Thirty-six positive test pits were distributed over a 57 m x 46 m area and yielded 99 domestic artifacts including ceramics diagnostic of the early-to-mid nineteenth century (ASI 2009a:124, 174-177).

The Stage 3 assessment of the Brady site was completed in July of 2008. Twenty-three one-metre square test units were excavated systematically in the topsoil to determine the nature and extent of cultural deposits. Artifact yields ranged from six artifacts in unit 470N-320E, to 159 artifacts in unit 485N-300E, with a total of 1,328 artifacts collected (ASI 2009b:9). The relatively high frequency of artifacts concentrated in the topsoil suggested the presence of a midden. The archaeological data along with the archival research conducted to place the site within the context of nineteenth-century land use indicated that it represented a homelot occupied on Lot 18 during the first half of the nineteenth century. Given the presence of a midden in the topsoil, the recommendation stemming from the Stage 3 assessment was continued hand excavation of one metre square units as part of a Stage 4 mitigation strategy if the site could not be protected from development impacts (ASI 2009b:40).

## 2.0 FIELD METHODS

The Stage 4 salvage excavation was initiated under the project and field direction of Ms. Denise McGuire (MTC CIF # P315-029-2010) with the reestablishment of the site datum at 500N-300E at the same UTM coordinates as the Stage 3 datum (Table B-2). A five-metre square recording grid was laid out by transit across the site area and the block excavation began on August 12, 2010. The one-metre square units were hand excavated five cm into the sterile subsoil, which consisted of beige-orange sand. All soil fills were screened through six mm wire mesh to facilitate artifact recovery and the artifacts were bagged with reference to the unit number (Plate 1). The subsoil in each unit was trowelled for the presence of features; a concentration of large field stones was uncovered within the 480N-290E recording square and left in situ. The soil fills consisted of a plough-disturbed sandy loam soil that ranged in depth from 17 cm in 482N-307E and 60 cm in 469N-287E. Topsoil was generally deeper on the southern part of the site.

A total of 462 units was excavated between August 12 and October 15, 2010; the weather conditions were appropriate for the excavation. Some of the units contained pre-contact Aboriginal lithic artifacts and all Aboriginal communities with an interest in the Darlington New Nuclear Project were informed of the discovery and an Aboriginal Liaison was identified should archaeological monitoring be required. The block excavation was completed when perimeter units totalled less than 90 artifacts, or physical constraints prevented further excavation. The latter included extreme slope and remnant lilac bush roots on the east perimeter, and the prohibition by OPG of excavation adjacent to their security fence on the south perimeter (Figure 2). It should be noted further that those uninvestigated lands south of the perimeter fence that may contain archaeological deposits are less than 10 metres from the bluff

overlooking Lake Ontario. Given the extensive block excavation that did occur, and the safety concern of working on the unstable bluff, no further work should be pursued in this area as it is unlikely that additional excavation on the extreme periphery would enhance the understanding of the site.

Following the completion of the midden excavation, a Gradall machine equipped with a smooth bucket was used to remove additional topsoil beyond the hand excavation limits, such that approximately 2,000 square metres of subsoil was exposed (Plate 2). This activity took place between November 1 and November 5, 2010 under the supervision of Ms. McGuire. A buffer of 10 metres was maintained between the cultural features exposed and the edge of excavation to ensure that an adequate area was stripped. After the topsoil had been removed, four potential cultural features were defined more precisely with shovel and trowel, and recorded within the established grid. It should be noted that none of the features were representative of the pre-contact, Aboriginal campsite occupation (Figure 3).

The settlement patterns were recorded with an optical transit located at the datum with the distance and angle being measured for the centre point of each feature. The features were mapped in plan view at a 1:10 or 1:20 scale, and then cross-sectioned to examine soil profiles and contents. The fill removed from each feature was screened through six mm wire mesh to optimize the recovery of small artifacts, and the artifacts were bagged with reference to the feature number (Plate 3). Cultural feature profiles were further mapped at a 1:10 or 1:20 scale as appropriate, photographed, and 100 percent excavated. This activity confirmed all four features were of cultural origin. Three soil samples were saved for future archaeobotanical study.

### 3.0 RECORD OF FINDS

#### 3.1 Cultural Features

The settlement pattern at the Brady site (ALGq-83) is composed of four cultural features: one root cellar and three refuse pits. Details of these features are summarized in Table 1.

**Table 1: Historic Feature Summary, Brady site (ALGq-83)**

Feature	Dimensions LxWxD (cm)	Plans and Profile	Fill Contents	Function
1	360x270x90	Rectangular, flat basin	Brown sandy loam with bricks and field stone	Root cellar
2	160x120x25	Irregular, basin	Layered, brown sand with ash and charcoal over dark yellowish brown silty sand with charcoal	Refuse pit
3	200x120x30	Oval, irregular basin	Dark yellowish brown sandy loam	Refuse pit
4	70x34x9	Oval, shallow basin	Dark brown sandy loam	Refuse pit

Feature 1 is a root cellar. On the surface it was 360 cm long and 270 cm wide. It was divided into quadrants and Quadrant 2, in the northwest, and Quadrant 4, in the southeast, were excavated first revealing a depth of 90 cm. After the profiles were photographed and drawn, Quadrants 1 and 3 were excavated. The fill consisted of brown sandy loam mottled with large rocks, charcoal, wood, and ash (Figure 4; Plates 4 – 6). One four-litre soil sample and one six-litre soil sample were taken for future archaeobotanical study.

In total, 3,094 artifacts were recovered from Feature 1. On the surface there were 87 artifacts consisting of three machine cut nails, five pieces of window glass, one indeterminate container, one piece of scrap,

three avian bones, 14 mammal bones, one canary ware sherd, five creamware sherds, fourteen pearlware sherds, 27 refined white earthenware sherds, two ironstone sherds, one yellow ware sherd, three coarse red earthenware sherds, and seven unidentifiable sherds.

Quadrant 1 of Feature 1 contained 602 artifacts consisting of 10 bricks, 14 hand-wrought nails, 53 machine cut nails, six indeterminate nails, one lock, 115 pieces of window glass, one miscellaneous building component, seven lighting devices, 45 indeterminate artifacts, 156 animal bones, three utensils, one bead, seven buttons, one straight pin, four smoking pipes, seven hardware pieces, one file, one shovel, two horse shoe nails, one mouth harp, 11 canary ware sherds, eight creamware sherds, two Jackfield sherds, 36 pearlware sherds, 79 refined white earthenware sherds, one yellow ware sherd, two bone china sherds, 13 coarse red earthenware sherds, 13 unidentifiable sherds, and one piece of pre-contact lithic shatter.

Quadrant 2 of Feature 1 contained 1,049 artifacts consisting of three bricks, 31 hand-wrought nails, 99 machine cut nails, four indeterminate nails, 11 pieces of window glass, one key, one lock, three lighting devices, 88 indeterminate artifacts, 515 animal bones, 13 utensils, one bead, eight buttons, two pieces of clasp knife, six smoking pipes, one token, nine pieces of hardware, one horse shoe nail, two slate pencils, two fence staples, three canary ware sherds, 10 creamware sherds, one Jackfield sherd, 43 pearlware sherds, 162 refined white earthenware sherds, three bone china sherds, four coarse red earthenware sherds, 21 unidentifiable sherds, and one pre-contact groundstone tool.

Quadrant 3 of Feature 1 contained 368 artifacts consisting of two locks, 19 hand-wrought nails, 30 machine cut nails, 26 pieces of window glass, 10 indeterminate artifacts, 126 animal bones, seven buttons, two coins, one dress hook, five smoking pipes, one harness buckle, one horse shoe nail, one tool, six canary ware sherds, three creamware sherds, one Jackfield sherd, 27 pearlware sherds, 82 refined white earthenware sherds, five coarse red earthenware sherds, one refined red earthenware sherd, and 12 indeterminate sherds.

Quadrant 4 of Feature 1 contained 988 artifacts consisting of 70 hand-wrought nails, 110 machine cut nails, 160 pieces of window glass, 25 lighting devices, one piece of domestic hardware, 51 indeterminate artifacts, 226 animal bones, four utensils, one tin can, 17 buttons, one coin, one eye glasses lens, three shoe fragments, 14 smoking pipes, one gunflint, three horse shoe nails, one pair of scissors, one straight pin, one unidentified tool, 12 pieces of hardware, 10 canary ware sherds, 11 creamware sherds, three Jackfield sherds, 61 pearlware sherds, 177 refined white earthenware sherds, one yellow ware sherd, one coarse red earthenware sherd, and 21 unidentifiable sherds.

Feature 2 is a refuse pit. On the surface it was 160 cm long and 165 cm wide. It was cross-sectioned along the longest axis and the southwest half was hand-excavated revealing a basin profile with a depth of 25 cm. The feature consisted of two layers. Layer 1 was comprised of brown sand mottled with ash and charcoal and Layer 2 consisted of dark yellowish brown silty sand mottled with charcoal. After the profile was drawn and photographed the northeast half was excavated stratigraphically (Figure 5; Plates 7 – 8).

A total of 50 artifacts was found in the southwest half of Feature 2. These consisted of 15 pieces of window glass, one unidentified artifact, 31 pieces of animal bone, two pearlware sherds, and one unidentifiable sherd. A total of 196 artifacts was recovered from the northeast half of the feature. From Layer 1, 167 artifacts were recovered including two hand-wrought nails, six machine cut nails, 10 pieces of window glass, 23 unidentifiable artifacts, 115 animal bones, two horse shoe nails, five pearlware sherds, one coarse red earthenware sherd, one refined white earthenware sherd, and one unidentifiable sherd. From Layer 2, 29 artifacts were recovered including one hand-wrought nail, two machine cut

nails, 13 pieces of window glass, one pot, nine pearlware sherds, and three refined white earthenware sherds.

Feature 3 is another refuse pit. On the surface it was 200 cm long and 120 cm wide. It was cross-sectioned along the north-south axis and the western half was hand-excavated revealing an irregular basin profile with a depth of 30 cm. The feature consisted of dark yellowish brown sandy loam mottled with charcoal, subsoil, and fired soil (Figure 6; Plates 9 – 10). One three-litre soil sample was taken for future archaeobotanical study.

A total of 132 artifacts was recovered from Feature 3 – 83 artifacts from the east half and 49 from the west half. In the east half, the artifacts were comprised of one piece of window glass, three indeterminate artifacts, 59 animal bones, 10 smoking pipe fragments, one Jackfield sherd, five pearlware sherds, one refined white earthenware sherd, and three unidentifiable sherds. From the west half the artifacts were comprised of one drainage tile, two hand-wrought nails, nine pieces of window glass, 26 animal bones, three smoking pipe fragments, two creamware sherds, three pearlware sherds, and three unidentifiable sherds.

Feature 4 is also a refuse pit. On the surface it was 70 cm long and 34 cm wide. It was cross-sectioned along the east-west axis and the south half was hand-excavated revealing a shallow basin profile with a depth of nine cm. The feature consisted of dark brown sandy loam mottled with ash and charcoal. The presence of a great deal of ash and charcoal in this feature would suggest burning or discard from fireplace remains (Figure 7; Plates 11 – 12). Only 10 creamware sherds were recovered from the complete excavation of this feature.

### **3.2 Artifact Distribution**

During the Stage 4 block excavations, artifact yields ranged between 42 in unit 478N-301E to 368 in unit 482N-291E. Given previous success in analyzing artifact type distribution in the plough zone (King 1988; Poulton and Dodd 2007), Golden Software Inc.'s Surfer 8 program was used to create a variety of maps that mapped the densities of certain artifact types throughout the site. The results can be seen in Figures 8 and 9.

The “Artifact Totals” map presents the density of all the artifacts scattered throughout the site (Figure 8). Artifacts seem to be concentrated between Features 1 and 2, in the southern area of the site, and as a series of clusters in a line starting from 476N-289E and stretching northeast to 301N-483E.

Early ceramics are primarily clustered between Features 1 and 2 and immediately to the south and southeast of the features (Figure 8). These comprise early ceramic types including salt-glazed stoneware, black basalt, creamware, pearlware, canary ware, and Jackfield. Late ceramics, on the other hand, not only cluster between Features 1 and 2 but also cluster east of the features and in the northeast of the site. Late ceramics are comprised of refined white earthenware, ironstone, and yellow ware. Kitchenware ceramics, represented by coarse earthenwares, stoneware, and yellow ware primarily cluster south of Features 3 and 4.

The faunal group, consisting of all bone remains, is concentrated on the southern and eastern edges of the site (Figure 8). It is also concentrated around 475N-290E and, again, between Features 1 and 2. Smoking pipes do not seem to have a distinct pattern and are scattered throughout the site with a few, highly concentrated clusters being located south of Feature 3, at 488N-300E, and at 466N-295E. It is likely that smoking pipes were discarded wherever the person using them was located – while working in the yard or

thrown away with the rest of the household garbage. Given the large amount of horseshoes and horseshoe nails, they were mapped to identify any possible horseshoeing areas (Figure 9). Horseshoe nails were concentrated in the western part of the site especially south and north of Features 3 and 4. Files, a common tool used for blacksmithing and horseshoeing, were mapped with the horseshoes and horseshoe nails. The nine files that were found in the plough zone are located within proximity of the horseshoe and horseshoe nail clusters.

The last group that was looked at were architectural items like hand-wrought and machine cut nails and flat window glass (Figure 9). Hand-wrought nails were concentrated between Features 1 and 2, around unit 300N-482E, and at the southern and eastern edges of the site. Machine cut nails were common between Features 1 and 2, east of Feature 1, and south of Features 1 and 2. Flat glass is common between Features 1 and 2 and directly south of them.

As seen in Table 2, all features contained artifacts, with almost all of them originating in Feature 1, the root cellar.

**Table 2: Distribution of Artifacts in Features**

<b>Feature</b>	<b>Artifact Yield</b>	<b>Percent of Total from Features</b>
Feature 1	3,094	88.8%
Feature 2	246	7.1%
Feature 3	132	3.8%
Feature 4	10	0.3%
Total	3,482	100%

### **3.3 Settlement Patterns**

The features at the Brady site are typical of rural domestic sites documented in southern Ontario in the nineteenth century. In particular, the Brady site contains a root cellar. The root cellar functioned as a place where vegetables and other provisions could be protected from the severe Canadian winter. They were excavated into subsoil within the house footprint and accessed by a trap door in the floor in the kitchen or living room near the fireplace (MacDonald 1997:58). It can be assumed, therefore, that Feature 1 marks the location of a simple pioneer home.

Refuse pits of unknown purpose were located southwest of the structure and may represent the remains of activities conducted at the site. Most of the artifacts were deposited south of these features and represent the main midden area. The main midden area shifted later during the site's occupation as is evident in the concentrations of later ceramics which are different from earlier ones. Kitchenware is isolated in one discrete area within the midden and, given the fact that crocks were often used for dairy processing, may represent a dairying area (Figure 8).

The presence of hand-wrought nails and machine cut nails in relatively similar places around Feature 1 suggests that the main domestic structure was renovated throughout its existence. Hand-wrought nails and machine cut nails were also present east of Feature 1. Hand-wrought nails clustered around unit 482N-300E and machine cut nails clustered around unit 483N-296E (Figure 9). The hand-wrought nail cluster suggests that a structure without a subsurface component was built around unit 482N-300E. Considering that very few machine cut nails are present there and later refined white earthenware ceramics were discarded in its proximity (Figure 8), it is safe to assume that that structure was abandoned.

Flat window glass is concentrated south of Feature 1 and indicates that the house did contain windows. Window glass was not concentrated where the nails were present east of Feature 1 suggesting that these structures did not contain windows (Figure 9). These were probably sheds, given that they are small, windowless buildings without a subsurface component, but it is equally possible that the location of the hand-wrought nail cluster was an early shanty that pre-dated the construction of the house containing the root cellar.

### **3.4 Artifact Inventory**

In total, 63,602 artifacts (Appendix A) were recovered during the Stage 4 mitigative excavation of the Brady site (AIGq-83). These are summarized by function and provenience in Table 3 below. A modified “Classification System for Historical Collections” (Canadian Parks Service 1992) was used to organize the data.

#### **3.4.1 Architectural Class**

Artifacts from the architecture class comprise 10.7 percent (n=6,834) of the total artifact assemblage found at the Brady site (AIGq-83). In this assemblage there are 1,040 hand-wrought nails that pre-date the 1830s, 1,635 machine cut nails that date to between 1830 and 1900, 46 wire nail that post-date 1900, and 10 indeterminate nails (Table 3; Appendix A; Kenyon 1982). The largest concentration of nails was found in Quadrants 2 and 4 of Feature 1 where many machine cut and hand wrought nails were found. Window glass (n=4,062), was common and the majority of it was also found in Feature 1; concentrating this time in Quadrants 1 and 4. Based on this, it can be stated that Feature 1 contains the remains of a structure that was constructed around 1830 with major refurbishments taking place afterward. Other architectural items include one brace, 15 bricks, six drainage tiles, one hinge, four lock fragments (Plate 13), five mortar fragments, six roofing slates, one door handle with a latch, and two L-tie fragments (Appendix A).

The brace is a tapered metal fragment with three nails through it. The drainage tiles are made from coarse red earthenware with black glaze on the interior and exterior surfaces. Four lock fragments are from three separate locks. Two of the locks are complete with brass pivoting key covers. The third lock is missing the front (Kenyon 1985b).

Fifteen bricks were collected from the Brady site. Thirteen of those were collected as a deliberate brick sample from Quadrants 1 and 2 in Feature 1. In the sample, there is one buff coloured brick and 12 red bricks. All of the bricks are handmade but come in different sizes and display different manufacturing techniques. Five red bricks were “sand struck.” In this method, sand is used to lubricate the bricks out of the wooden moulds in which they are formed (Gurcke 1987:16). Sand gives handmade bricks a rough, granular texture (Gurcke 1987:103). Four of the sand struck bricks are 3.5 inches wide and between 1.5 and 1.75 inches in thickness. The last sand struck brick is 3.75 inches wide and 2.25 inches thick. Three of the smaller bricks exhibit vertical strike marks – meaning that the metal blade was pulled length-wise along the brick to clear the excess clay off (Gurcke 1987:103). Another brick exhibits diagonal strike marks while the last does not have any identifiable strike marks at all. Strike marks could be obscured with a little water or by tapping dry bricks with a flat board to give them a clean edge (Gurcke 1987:103).

**Table 3: Artifact Totals by Functional Class and Provenience**

<b>Artifact Class</b>	<b>Plough Zone</b>	<b>Features</b>	<b>Totals</b>	<b>Class Total as Percent of Site</b>

<b>Artifact Totals</b>	<b>60,120</b>	<b>3,482</b>	<b>63,602</b>	<b>100%</b>

Six red bricks and the buff brick were “water struck.” In this method, water is used to lubricate the bricks out of the wooden moulds (Gurcke 1987:16). Water-struck bricks exhibit small ripples at the bottom of the brick as well as containing smoother or flatter surfaces than sand struck bricks due to the smoothing effect of the water (Gurcke 1987:106). The buff brick is 4.25 inches wide and 2 inches thick with indeterminate strike marks and large pebble inclusions. Two of the red water-struck bricks are 3.25 inches wide and 1.75 inches tall and exhibit vertical strike marks. One of the bricks is almost complete and is 3.5 inches wide, 1.5 inches tall, and 6.75 inches long with vertical strike marks. Another brick is only fragmentary and only a height of 1.5 inches would be measured. Another brick is 4 inches wide and 2 inches tall with horizontal strike marks. The last water struck brick is skewed. It is 3.75 inches wide but is 2.5 inches tall on one side and 1.75 inches tall on the other. Strike marks are not visible and it would appear that the brick was broken and then used in the masonry as some mortar has adhered to a jagged, broken edge of the brick.

The last brick is very unusual as it looks to be extremely water worn. It contains a many inclusions including crushed brick, coal slag, sand and pebbles. Overall, it is very crude and poorly made and measures 4 inches wide and 2.25 inches tall.

Some basic variation in hand-made bricks should not be surprising. In pre-industrial scove kilns, bricks shrank at a varied rate depending on how close they were to the fire with some being lost to under and over firing (Gurcke 1987:32). Further, the thickness of the bricks was effected by mould wear as wooden moulds could lose up to a quarter of an inch in height due to wear over the course of a season (Gurcke 1987:116). However, the brick sample from the Brady site exhibits a wide range of brick widths, colours, inclusions, and striking techniques suggesting that the bricks came from several different brick manufacturers. This would suggest that the bricks at the Brady site were bought or scavenged piecemeal without a concerted effort to buying a set from a single manufacturer.

### **3.4.2 Furnishings**

In the furnishings class, there was a total of 58 artifacts (0.1 percent) (Table 3; Appendix A). These include two porcelain figurine fragments from one figurine, three flower pot sherds, one chest lock (Plate 13), one chest key (Plate 13), one drawer handle, 12 tacks, one upholstery nail, one unidentified shaft with a threaded tip, and 36 lamp chimney fragments (Appendix A).

What is considered to be the first modern oil lamp was first patented by Ami Argand in 1784 in England. He attempted to improve lighting with a wick sandwiched between an inner and outer tube, a chimney to enclose the flame, and a metal body with enclosed font and a feeding system that dates back to the sixteenth century (Woodhead et. al. 1984:38). Subsequent styles improved on this initial design and were intended to burn whale oil. However, before the second half of the nineteenth century this fuel was not widely available, and the use of vertical wick lamps was limited to coastal centres and more affluent households. A popular 1840s version of the lamp allowed different types of fuels, including lard, to be used (Woodhead et. al. 1984:38). Despite these technical innovations in lighting, there does not appear to have been much impact in Canada where candles and pan lamps continued to be used at least into the late 1850s (Woodhead et. a. 1984:38). Therefore, evidence of an oil lamp on this site is interesting and could indicate that merchants in port towns on Lake Ontario such as Bowmanville were able to obtain the whale oil fuel. This whale oil fuel was then made available to early pioneers living near these ports such as the people who occupied the Brady site.

### **3.4.3 Kitchen/Food-related Class**

The Stage 4 mitigative excavation of the Brady site (AlGq-83) produced 43,411 kitchen and food-related artifacts comprising 68.3 percent of the artifact assemblage (Table 3; Appendix A). These artifacts relate to the storage, preparation, distribution, and consumption of food and beverages.

#### **3.4.3.1 Ceramics**

Ceramics are a useful tool for dating archaeological sites because of the historical progression of types in industrial-era ceramic production. Much of the innovation that took place in the eighteenth-century English ceramic industry resulted from the competition with the imported porcelain market from continental Europe and China (Kaellgren 2009:13). Thus in the 1740s, the English potters began experimenting with two new types of ceramics: a refined cream-coloured earthenware and a white salt-glazed stoneware (Copeland 1995:4). White salt-glazed stoneware, produced by casting salt into the kiln at peak temperature, was a standard product between 1740 and 1760 (Kaellgren 2009:23). The lightweight cream-coloured earthenware was also produced as early as 1740 by Enoch Booth but was perfected by Josiah Wedgwood in 1762 and quickly became attractive and popular as a status ware (Copeland 1995:4-6). As the name might suggest, creamware is creamy in colour due to the lead glaze applied to the vessels. The creamware glaze lightened in colour during the early nineteenth century with significant technological leaps in the ceramic making process (Majewski and O'Brien 1987:117). Creamware was originally imported into Ontario alongside white salt-glazed stoneware but by 1800 creamware was the consumer favourite (Collard 1984). While creamware continued to be imported until the 1830s, its popularity declined significantly in favour of pearlware (Kenyon 1995).

The success of creamware sales allowed Josiah Wedgwood to work on more ornamental wares such as the dry-bodied stoneware known as black basalt. It was produced in forms for tea and coffee services as well as vases that were decorated to imitate those being excavated from Etruscan tombs. Wedgwood's line of black basalt wares was launched in 1768 (Kaellgren 2009:17). It stopped being imported into Ontario around 1813 (Jouppien 1980:27).

Given the influx of creamware on the market, it quickly became an "old-fashioned" ware and to stay competitive pearlware was invented as an alternative to creamware in the mid-1770s. It tried to imitate Chinese porcelain by adding a small amount of cobalt oxide to the glaze and creating a slightly bluish tint (Miller and Hunter 2001). Pearlware ceramics were better suited for cobalt blue decorations which allowed pearlware to slowly grow in popularity (Majewski and O'Brien 1987:118). Decorated with a variety of mostly blue motifs, it outnumbered creamware by the early 1800s. Pearlware vessels continued to be sold in Ontario until the mid-1830s, when they were replaced with refined white earthenware (Kenyon 1995). Other ceramics that were produced at this time include canary ware and Jackfield. Canary ware, developed by adding a yellow glaze to the earthenware body, was produced in England between 1780 and 1835 and largely used for tea services, figurines, and some domestic table forms (Miller 1974). Jackfield ceramics, refined red earthenware vessel forms with a glossy black glaze, were also popular in tea services during this time (Jouppien 1980:27).

In competition with the local English bone china market, refined white earthenware was slowly developed from pearlware by reducing cobalt from the glaze and adding it to the body and thus effectively making the ceramic white in colour (Majewski and O'Brien 1987:119). It grew in popularity due to the fact that many different underglaze colours looked better on a white-bodied ceramic than they did on the light-blue

pearlware (Collard 1984:114). Thus, almost always decorated, refined white earthenware quickly became the most popular ceramic of the mid-nineteenth century (Majewski and O'Brien 1987:120).

Later, ironstone, or white granite as it was also referred as, started being produced in England in the 1840s as a heavier, cheaper alternative to the influx of hard paste porcelains from France into the frontier markets of Canada and the United States (Majewski and O'Brien 1987:120). Due to its very hard durable body it became ubiquitous in frontier households. It started appearing in Ontario merchants' records in 1847 and grew in popularity, steadily replacing refined white earthenware as the ceramic ware of choice in the late nineteenth century, peaking in the 1880s (Kenyon 1995). Another late nineteenth-century ceramic type was yellow ware. Yellow ware started appearing in merchants records in Ontario around the time as ironstone and was used primarily as kitchenware. Some variants of it are still used today (Kenyon 1995).

The Kitchen/Food-related ceramic assemblage from the Brady site contains 43,205 sherds. The earliest ceramics are comprised of black basalt (n=1), white salt-glazed stoneware (n=1), creamware (n=1,890 or 4.4 percent), canary ware (n=511 or 1.2 percent), pearlware (n=14,213 or 32.9 percent), and Jackfield (n=490 or 1.1 percent). Mid-nineteenth century ceramics are represented by refined white earthenware (n=11,434 or 26.5 percent). Later ceramics are represented by ironstone (n=31 or 0.1 percent) and yellow ware (n=169 or 0.4 percent) (Appendix A).

Less temporally specific wares are comprised of buff earthenware (n=4), coarse red earthenware (n=3,189 or 7.4 percent), refined red earthenware (n=18) and stoneware (n=4). Red and buff earthenwares are heavy, thickly potted ceramic types that receive their names from the colour of the clay after firing – red and buff respectively. As they are porous, they had to be glazed to make them food safe. Usually coarse earthenware pots were produced from local clay at local potteries in contrast to the refined ceramic types that were imported into Canada. The local Ontario manufacturing of coarse earthenwares began as early as the late 1820s when the German-speaking potters immigrated into the areas of Waterloo County and the Niagara Peninsula (Newlands 1979:22).

On the other hand, porcelains represent a very delicate, finely made status ceramic. Both Chinese porcelain (n=2) and English porcelain (n=42) were found on the Brady site (AlGq-83) (Appendix A). While Chinese hardpaste porcelain was manufactured as early as the seventh century AD in China, it was not exported to Europe in significant quantities until after the fifteenth century and the English colonies until the eighteenth (Majewski and O'Brien 1987:125-126). Europeans were only able to recreate china in the eighteenth century, the first commercially viable version being bone china first marketed in England by Josiah Spode during the 1790s (Majewski and O'Brien 1987:126). Because of its reputation as a status ceramic, porcelain is not very chronologically diagnostic.

Finally, there are 11,206 sherds (25.9 percent) unidentifiable as to ware type as they are too exfoliated or thermally altered to be positively identified (Appendix A).

Five vessel bases contain the Davenport maker's mark consisting of an impressed anchor. Davenport was one of the Staffordshire Potteries that operated between 1793 and 1887. Its trade mark, the anchor with the words "DAVENPORT", was used between 1795 and 1820 (Godden 1991).

Decorative styles on refined ceramics are a very good way to identify the age of a given assemblage. Given that decorative styles change quickly over time they offer a finer focus when assessing occupation dates of an archaeological site. A summary of these styles, as well as the date range for their availability, is presented in Table 4. Based on this table and the percentage of wares discussed above, the assemblage dates from *circa* 1800 to the early 1840s.

It is important to note that no stamped, sponged, and flow ceramic motifs were found at the Brady site. Spongeware was produced by dabbing the body of a ceramic with a rough sponge filled with colour and was sold as a cheaper alternative to painted ceramics on teaware and bowls. It was first introduced in Ontario around 1843 and became commonplace in the late 1840s. Flow ware was a transfer printed design where the colours were deliberately allowed to run into the glaze. They were first introduced to the Ontario market around 1845 and sold at 20 percent more than common printed ceramics. Despite its high cost, the motif was very popular among those who could afford it (Kenyon 1995:6). Given this information, it can be said that the Brady site does not date much later than the mid-1840s.

**Table 4: Refined Ceramic Decorative Styles and Approximate Date Ranges in Ontario**

Style	Date Range	No. sherds	% of decorated ceramics
Hand-painted, early palette	1796-1830	772	8.0%
Hand-painted, monochrome blue	1796-1830	3,130	32.4%
Edgeware, green scalloped	1800-1830	87	1.0%
Edgeware, blue scalloped	1800-1840	1,916	19.7%
Spatterware	1810-1850	420	4.3%
Transfer print, blue chinoiserie	1815-1835	5	0.1%
Transfer print, olde blue	1815-1835	236	2.4%
Edgeware, embossed	1820-1835	104	1.1%
Transfer print, blue	1820-present	1,109	11.5%
Transfer print, green	1828-present	3	0.1%
Transfer print, red	1828-present	183	1.9%
Transfer print, black	1830-1840	300	3.1%
Transfer print, brown	1830-1860; 1880s	108	1.1%
Transfer print, pink	1830-1850	43	0.4%
Hand-painted, late palette	1830-1870	1,157	11.9%
Edgeware, straight	1840-1885	96	1.0%
<b>Total</b>		<b>9,669</b>	<b>100%</b>

Turning to a discussion of vessel uses, 7.5 percent of all ceramics are kitchenware (n=3,232), 88.4 percent are tableware (n=38,219), 3.9 percent are teaware (n=1,701) and 0.1 percent are unidentified (n=10) (Table 3; Appendix A). The ceramics have also been sorted into a minimum number of vessels based on diagnostic rims, ware type, and distinctive decorative attributes (Tables 5 – 9). Coarse vessels were identified based on unique rim styles and/or overall shape. In total, 128 vessels were identified. These include 30 teacups, 33 saucers, three teapots, one mug, four pitchers, 23 bowls, two child’s plates, eight muffin plates, six twiffler plates, one soup plate, five supper plates, eight table plates, two unknown plates, one meat dish, and one jug.

Jug	1		
<i>Unknown</i>		2	1.6%
Unknown Plate	2		
<i>Vessel Totals</i>		128	100%

Turning to the discussion of socio-economic status, a modified system of Paul Farnsworth's system was used as applied by Katherine Hull on farm sites in Ireland. Here the refined earthenware is categorized from the least expensive to the most expensive: undecorated, minimally decorated (edged, spattered or factory slipped), painted, and printed (Hull 2007). Only refined white earthenware and pearlware was utilized as only these wares were regularly decorated in the early nineteenth century.

**Table 11: Ceramic Decorative Types at the Brady site (AlGq-83), Ranked by Expense**

	Undecorated	Edged	Spattered	Factory-slip	Painted	Printed	Total
Vessels	3	21	5	4	51	30	114
Percentage	2.6%	18.5%	4.4%	3.5%	44.7%	26.3%	100%

Based on the table above, it is clear that the Brady site (AlGq-83) was the location of a fairly affluent farmstead. Over a quarter of all ceramic vessels display the expensive transfer print motif and 44.7 percent are fairly expensive painted ceramics. Twenty-one pieces of edged ceramics are exclusively comprised of flat food consumption and food service dishes (Appendix A).

### 3.4.3.2 Utensils

A total of 61 utensil pieces were found at the Brady site (ALGq-83) comprising a total of 48 different utensil fragments. These consist of nine forks, six table knives, one carving knife, five table spoons, six tea spoons, five serving spoons, five other spoons, and 11 handles (Appendix A). The utensils are summarized in Table 12 below:

**Table 12: Utensils at the Brady site (ALGq-83)**

Utensil	Cat. #	Provenience	Description	
Fork	1320	467N-287E	Fork tip with two tines

	18859	489N-308E	Bone handle decorated with incised lines

### 3.4.3.3 Other Non-Ceramic Kitchen/Food-related Artifacts

Other Non-Ceramic Kitchen/Food-related artifacts are comprised of four drinking glass fragments, nine glass tumbler fragments, one bottle cap, 87 dark green olive liquor glass fragments, three unidentifiable container fragments, 72 cast iron cooking pot fragments, two pieces of a colourless glass liner, one tin can, and nine miscellaneous artifacts (Table 3; Appendix A). The colourless glass liner has an embossed crown motif on the upper surface with the words “MADE IN CANADA.”

The tin can is comprised of a cylindrical base fragment with a punctured hole through the base. It is interesting because when the site was occupied storing food in tin cans was a relatively new and still greatly inefficient and expensive venture. Tin canning first began in 1810 when cans were manufactured by hand out of a tin or iron plate and while improvements were made to reduce can failure, which in the early days was quite frequent, mechanization of the canning process did not start until 1847 (Rock 1984).

### 3.4.4 Organic Class

There are 9,494 artifacts in the organic class at the Brady site (AIGq-83) representing 14.9 percent of the artifact assemblage. The faunal assemblage consists of 288 avian bones, 123 fish bones, 8,979 mammal bones, 19 reptile bones, 61 shells, and 24 unidentifiable bones. Most of the bone was found in the plough zone and Feature 1 (Table 3; Appendix A).

For this report, Dr. Suzanne Needs-Howarth of Perca Zooarchaeological Research was retained by Archaeological Services Inc. to analyze 1,126 faunal remains recovered from the features at the Brady site (AIGq-83). Her report is incorporated below.

#### 3.4.4.1 Method

All bone fragments were identified to the lowest taxonomic level possible by direct comparison with a modern reference skeleton and described in terms of element, portion, side, cultural and natural modifications, and indicators of skeletal age. Nomenclature follows the Integrated Taxonomic Information System ([www.itis.gov](http://www.itis.gov)).

#### 3.4.4.2 Taphonomy

The faunal material was reasonably well-preserved overall. Preservation conditions were favourable to the preservation of calcium carbonate, as evidenced by the large number of fish scales. Screening was carried out so carefully that almost all of those fish scales survived intact. The mammal material was mostly very fragmentary and small in dimensions. Some of the mammal bone had suffered from severe rodent-gnawing – especially the vertebrae and some of the metapodia and phalanges. The size and shape of the gnaw-marks suggests rat – although strangely no rat bones were recovered (nor cat bones that may account for the lack of rat bones).

Post-depositional disturbance of the three features is evidenced by the remains of vole and frog or toad, neither of which are usually considered food items by people of Euro-Canadian heritage in nineteenth-century Ontario.

A total of 140 of the 1,089 food-related items were heat altered (13 percent); 60 of the 873 items from Feature 1 (7 percent), eight of the 138 from Feature 2 (6 percent), and 72 of the 82 from Feature 3 (88 percent). Most of the heat alteration was in the form of calcination, although a few items showed charring.

#### 3.4.4.3 Zooarchaeological findings

The assemblage of 1,126 items included a total of 21 unique taxa (Table 13), of which all six fish taxa, four bird taxa, and three mammal taxa likely relate to the food refuse of the historic occupation, totalling 1,089 items. The taxa that are not human food refuse are excluded from the percentage calculations in Table 13.

##### 3.4.4.3.1 *Gastropoda*

The single gastropod element is likely an intrusive land snail.

##### 3.4.4.3.2 *Osteichthyes*

Most of the fish remains are percidae and perciformes fish scales from Feature 1. Feature 1 contained significant numbers of very well-preserved fish scales, some vertebrae, and a few cranial bones, making up 11 percent of the feature NISP. There are some lake fish that may have resulted from a local commercial fishery (*Coregonus*); as well as cod, which would be imported; and several kinds of fish that may have been encountered in streams near the site and that were likely not part of any commercial fishery (*Catostomus*, *Ameiurus*, *Ambloplites*). Features 2 and 3 had hardly any fish (one percent and two percent of NISP, respectively).

##### 3.4.4.3.3 *Aves*

Most of the bird remains are of the domestic fowl commonly found on nineteenth-century sites in Ontario: goose (9 percent of bird NISP) and chicken (18 percent). Domestic duck was not positively identified.

**Table 13: Taxonomic Overview of Features at the Brady site (ALGq-83)**

		Total			Feature 1			Feature 2			Feature 3		
		NISP non- food	NISP food	% of class	NISP non- food	NISP food	% of class	NISP non- food	NISP food	% of class	NISP non- food	NISP food	% of class

The single turkey bone could be domestic or wild. The contribution of birds varies by feature, with Feature 1 having 90 pieces of bone (10 percent of bird NISP), Feature 2 having 34 (25 percent), and Feature 3 having only two (two percent). Most of the chicken remains are from Feature 1, whereas most of the goose remains are from Feature 2. The items from Feature 2 include several very well-preserved goose cranial elements, perhaps the result of primary butchering of fowl. However, there are no foot digits in that Feature, whereas there are in Feature 1. Some foot digits may have gone through the screen if they were oriented vertically – but some clearly are caught, as the three in this collection are of birds up to the size of goose, rather than the much more robust-footed turkey.

There are some bones of very small birds in Feature 1, likely the result of cat activity. The owl tarsometatarsus in Feature 2 is an unusual find for a historic site. It could be from an animal that died a natural death and some of whose remains ended up in this deposit as secondary refuse. Or, given that it must be from a small owl, perhaps this also represents cat hunting activity, perhaps of an injured animal.

#### *3.4.4.3.4 Mammalia*

Mammal remains make up the vast majority of the NISP. The 667 food-related mammal remains in Feature 1 are 76 percent of NISP, the 93 in Feature 2 make up 67 percent, and the 78 in Feature 3 make up 95 percent. The high percentage in Feature 3 may in part be due to taphonomy, because it also has the highest proportion of heat alteration, particularly calcination. Heating to the point where the bone becomes calcined can result in fragmentation, thus inflating the bone counts compared with non-calcined material. This is also why most of the Feature 3 material could not be identified beyond mammal size class. It also resulted in a higher proportion that could not be identified beyond general size class (note the higher proportion of sheep to cow size mammal versus pig, sheep size mammal or cow size mammal).

Among the identified mammal remains, pig dominates, making up 17 percent of the Feature 1 mammals and 23 percent of those in Feature 2. Feature 3, as noted, had very few identified mammals of any kind. The chipmunk and squirrel remains are somewhat unusual on this kind of site. One would expect the rodents to be rats, of which none were identified, although their tooth marks are much in evidence.

#### *3.4.4.4 Butchering*

Only 15 items showed clear signs of having been cut as part of the primary or secondary butchering process. They were all pig. Two showed clear marks relating to a meat saw. Most of the rest seem to be fairly coarsely chopped, perhaps with a meat cleaver. Since ribs and especially vertebrae are routinely cut on nineteenth-century Ontario sites, and since there are only five cut ribs and no cut vertebrae, it seems likely that some cut marks have been obliterated by the extensive rodent gnawing. Once a vertebra is cut sagittally, a rat has very easy access to the spongy bone of the vertebral body (although rats also seem to go for the transverse process, which involves chewing through cortex first).

#### *3.4.4.5 Faunal Discussion*

This assemblage contains a limited variety of mostly domesticated mammal and bird taxa that are consistent with the location and time period of the site, as well as several local and one non-local fish. There are some differences between the three features examined, in that only Feature 1 had much fish, mostly scales. The items from Feature 2 include bird cranial elements, perhaps the result of primary

butchering of fowl. The items from Feature 3 are mostly calcined medium to large mammal and may represent purposeful burning of food refuse.

### 3.4.5 Personal Class

There are 859 artifacts in the personal class comprising 1.4 percent of the assemblage at the Brady site (AlGq-83). This includes three adornment items, 143 clothing items, eight medicine items, 703 personal gear items, and two toilet/hygiene items (Table 3; Appendix A).

#### 3.4.5.1 Adornment

The adornment artifacts at the Brady site are limited to three cobalt blue rounded glass beads that measure between 6.0 and 7.2 mm in diameter (Plate 18) (Appendix A).

#### 3.4.5.2 Clothing

The clothing items at the Brady site are comprised of one belt buckle, one cuff link, two dress hooks, two eyelets, three leather shoe fragments, and 134 button pieces. The cuff link is very ornate, comprised of a hollow metal ball with holes throughout the body (Plate 18). The shoe leather fragments are thick and contain square nails.

Among the buttons, 134 pieces comprise a total of 129 individual buttons. These include 23 bone buttons, 90 metal buttons, two glass buttons, 13 shell buttons, and one plastic button (Plate 19). Bone buttons were mostly utilitarian in nature primarily intended for men’s underwear. They were some of the earliest buttons produced beginning in the eighteenth century, and they started to fall out of popularity by the 1850s. After the 1850s, bone buttons were produced in lesser and lesser numbers until they disappeared in the beginning of the twentieth century (Ferris 1986:100). The bone buttons range from 10.0 mm to 17.5 mm at the Brady site (Appendix A). Ten of the buttons contain only a single hole indicating that they were used as bone backing for metal buttons. Two buttons contained three holes; three-holed sew through buttons were common for children and toys (Ferris 1986:100).

Metal buttons were also commercially manufactured beginning in the eighteenth century. Most metal buttons fell out of fashion by the 1830s, but utilitarian metal buttons continued to be used throughout the nineteenth century (Ferris 1986:98). The metal buttons range between nine and 35 mm in diameter and a large variety of button types are present including suspender buttons, coat buttons, waistcoat and vest buttons, and sleeve buttons. Forty-one buttons have inscriptions on them, these are summarized in Table 14.

**Table 14: Metal Buttons with Inscriptions at the Brady site (AlGq-83)**

Cat. #	Provenience	Diameter	Description
1176	466N-294E	13.5 mm	One piece flat disk with alpha shaped shank; “IMPERIAL STANDARD”
1884	468N-289E	19.0 mm	One piece, flat; “SUPERFINE LONDON COLOUR”
2005	468N-292E	13.5 mm	One piece; “ART”
2414	469N-292E	19.5 mm	One piece flat disk; “GILT EXTRA RICH, STANDARD, TREBBLE IRON”
2866	470N-292E	16.0 mm	One piece, convex button with floral motif; “GH COLOUR”
3599	472N-288E	20.0 mm	One piece, flat; “EXTRA/FINE” and two floral garlands on reverse

**Table 14: Metal Buttons with Inscriptions at the Brady site (ALGq-83)**

Cat. #	Provenience	Diameter	Description
3693	472N-290E	14.2 mm	One piece, flat disk with alpha shank; "BEST QUALITY"
4115	473N-289E	19.0 mm	One piece, flat disk with alpha shank; "RICH ORANGE/STANDD GILT"

6268	476N-291E	NA	Flat one piece button with broken shank; "TRCBIG"
6484	476N-296E	NA	Flat one piece button with alpha shank; "LEWIS & JONES/EXTRA RICH"
7923	478N-293E	NA	Flat button fragment; "T D * PL"
9279	480N-284E	NA	Two piece stamped brass with metal eye, bird motif on the front; "EXTRA TRE_ STANDARD" (Plate 19)
9901	480N-297E	18.5 mm	One piece, flat disk with alpha shank; "TREBLE GILT STANDD COLOUR"
10339	481N-284E	NA	One piece, flat with broken shank; "TOMES/RICH"
10673	481N-292E	14.0 mm	One piece, flat disk; "BEST QUALITY"
11655	482N-288E	9.0 mm	One piece, flat disk; "GILLET & TORRY/WARRANTED"
12468	482N-303E	14.6 mm	One piece, flat disk; "PLATE"
12889	483N-288E	NA	One piece, flat disk; "LA"
13438	483N-299E	13.4 mm	One piece, flat disk; "IMPERIAL STANDARD"
13605	483N-302E	13.5 mm	One piece, stamped wreath motif; "EXTRA/FINE"
13725	483N-305E	NA	Flat metal button with ferrous metal in the centre and cupreous exterior surface; "IMPROVED/_ATE"
14206	484N-293E	NA	Flat pewter disk, stamped wreath, cast eye shank; "EXTRA/FINE"
14749	484N-307E	18.2 mm	One piece, flat disk, alpha shank; "EXTRA/TREBEL PLATED"
14884	485N-297E	12.0 mm	Two piece flat button with an alpha shank, centre of button has six embossed equal sided crosses, a metal ring embossed with flowers are cast on the edge of the rim; "BEST QUALITY"
15147	485N-293E	12.6 mm	Two piece button with embossed six pointed star in centre and geometric shapes expanding from centre; "ORANGE/COLOUR"
15228	485N-295E	9.0 mm	One piece, flat disk with omega shank; "EXTRA/FINE" with wreath
15429	485N-300E	12.8 mm	Plate button with four holes; "MERRIMAN LOYL/WATFERRIR"
15816	486N-287E	11.5 mm	One piece flat disk with floral motif; "STAND GILT COLO"
16050	486N-293E	14.5 mm	One piece flat disk; "SUPERFINE" with wreaths
19158	490N-303E	NA	One piece flat disk; "IMVCKIAL" and "TREBLE/GILT"
20152	493N-308E	14.5 mm	One piece flat disk; "TRONG TREBLE"
20441	Feature 1	NA	One piece, four hole flat disk; "WARRANTED/NOT TO CUT"
20450	Feature 1	16.0 mm	One piece 41 <sup>st</sup> Regiment of Food button; "J. McGOWAN/LONDON" (Plate 19)
20532	Feature 1	18.5 mm	One piece, cast eye shank; "EXTRA COLOR" (Plate 19)
20533	Feature 1	19.5 mm	One piece; "RICH TREBLE GILT/G.B."
20690	Feature 1	NA	One piece flat disk, alpha shank; "PLATED"
20691	Feature 1	12.0 mm	One piece flat disk, omega shank; "DOUBLE GILT/No 1"
20692	Feature 1	12.8 mm	One piece flat disk; "LONDON IMPERIAL"
20693	Feature 1	NA	One piece, floral motif; "IMPERIAL QUALITY"
20695	Feature 1	NA	Bent, one piece; "EXTRA/FINE" wreaths on reverse

One of the most interesting buttons at the site is the military button from the 41<sup>st</sup> Regiment of Foot found in Feature 1. It is a silver-plated officer's button with the number "41" and an eight pointed star around the number in relief on the front. On the back the eyelet is flatted and the letters "J. McGOWAN/LONDON" are embossed on the back. The button was made by the James McGowan Company, which manufactured army and navy buttons between 1800 and 1844 (Nayler 1993:50). The button itself predates 1813 as in that year the officers' buttons started being gilded and the number was replaced by a cross inside a plain circle (Parkyn 1956:207).

The 41<sup>st</sup> Regiment of Foot was the only full British regiment stationed in Upper Canada at the outbreak of the War of 1812. The regiment saw heavy action throughout the war and participated in the capture of Fort Detroit, Battle of Queenstown, Battle of Frenchtown, Battle of Moraviantown, assault on Fort Niagara, and the Battle of Lundy's Lane to name but a few engagements. The regiment left for Europe in 1815 but some chose to stay behind and others returned later once their commissions ended (Forty-First Foot Re-enactment Society 2009). The button at the Brady site may suggest that one of the site's occupants or perhaps a visitor served in the 41<sup>st</sup> regiment while they were stationed in Canada and then chose to stay behind.

Glass buttons were never produced in any significant quantity. They were introduced as early as the 1830s and used for coatlinks and occasionally on coats and elaborate dresses (Ferris 1986:102). It is not surprising that only two were found at the Brady site. Both of them are cobalt blue buttons. One is only a fragment while the other is 11.4 mm in diameter with a geometric moulded pattern on the front and the shaft missing (Appendix A). Given their intricate style the buttons would most likely have been from an elaborate dress.

Shell buttons became popular after 1820 and could be made cheaply enough for local entrepreneurs to establish factories. They were worn mostly on shirts and blouses with larger specimens used for waistcoats, frocks, and full-length coats (Ferris 1986:100). Shell buttons range between 8.6 mm and 10.0 mm in diameter. Ten of the buttons are four-holed, one is two-holed, and two are too fragmentary to identify (Appendix A). These buttons were most likely used on shirts and blouses.

It should be noted that no prosser buttons were found at the site. These ceramic buttons were the most popular buttons in the second half of the nineteenth century. Invented in 1840 in England, their manufacture quickly spread to France and the United States because of their affordable price (Sprague 2002). The lack of prosser buttons would suggest that the site does not date much later than the mid-1840s (Ferris 1986:104).

Finally, plastic buttons are twentieth-century items that completely dominated the button industry by the 1950s (Sprague 2002:115). Therefore, the plastic button found at the Brady site is intrusive.

#### *3.4.5.3 Medicine*

The medicine artifacts at the Brady site are limited to eight medicine bottle fragments. Two of the medicine bottles are made from dark brown glass, three are from light blue glass, two are from colourless glass, and one is from solarised glass (Appendix A).

#### *3.4.5.4 Personal Gear*

Out of 703 personal gear items found at the Brady site there are three clasp knife fragments, four coins, one round colourless eye glass lens (Plate 18), five tokens, and 690 smoking pipe fragments. Four clasp knife fragments represent three separate clasp knives. One has a bone handle with vertical lines, another is a blade with a spear shaped tip and a nail nick on the blade, and the last clasp knife is almost complete, metal, and folded in on itself (Plate 18). Clasp knives were popular in the nineteenth century and were generally hand-constructed before 1835. With the arrival of mass production they became available in a variety of styles and marketed to both men and women (Kenyon 1985a).

The coins and tokens at the Brady site date between 1772 and circa 1830 and originate from a wide variety of places including Spain, England, Prince Edward Island, Nova Scotia, Upper Canada, and Lower Canada (Appendix A). The coins are summarized in Table 15.

**Table 15: Tokens and Coins Recovered from the Brady site (AlGq-83)**

Cat. #	Provenience	Date	Description
2611	470N-287E	1814	“BROKE” over bust of Captain Broke over “HALIFAX, NOVA SCOTIA”/“BRITANNIA” over a seated Britannia over “1814” (Plate 18)
3830	472N-293E	NA	Head with “GEORGIUS III REX”/crown; mostly exfoliated
6144	476N-289E	1820	“HALF PENNY TOKEN” over sail boat over “UPPER CANADA”/“COMMERTIAL CHANGE” over shovel and anvil over “1820”
6267	476N-291E	1822	“GEORGIUS III DEI GRATIA” with Laureate draped bust/“BRITANNIAR REX FTD DEF” over a seated Britannia over “1822” (Plate 18)
11069	481N-299E	1820	Exfoliated, Lady Justice on one side/a bust over “1820”
20436	Feature 1	1830	“SPEED THE PLOUGH” over two cattle pulling a plough over “HALF PENNY TOKEN”/“NO LABOUR” over a man threshing grain over “NO BREAD”
20526	Feature 1	NA	Worn, ship/“SHIPS” over “COLONIES” over “COMMERCE”
20527	Feature 1	NA	Worn, seated Britannia boarded by a wreath/eagle with arrows clenched in its talons and “F PENN,” nail hole through the coin (Plate 18)
20673	Feature 1	1772	Worn and exfoliated Carlous III 1772 coin, bust/coat of arms

It is important to note that the token that contains a seated Britannia on one side and an eagle with arrows clenched in its talons (Cat. #20527) has a hole through it (Plate 18). This suggests that this token was not used for exchange purposes, at least in its final function. Rather it would have probably been worn as an adornment item and hung as a pendant.

Out of 690 pipe stem fragments, 442 are bowls, four are mouthpieces, six are spurs, and 238 are stems. None of the stems contain maker’s marks (Appendix A).

#### 3.4.5.5 Toilet/Hygiene

There are two toilet/hygiene related items at the Brady site. One is a yellow ware rim fragment from a chamber pot and the other is an incomplete bone lice comb (Appendix A).

### 3.4.6 Tools and Equipment Class

There are 331 artifacts associated with the tools and equipment class at the Brady site (AlGq-83), comprising 0.5 percent of the total assemblage. They consist of 14 agricultural items, 126 animal husbandry items, eight armament items, 16 general tools, 149 hardware artifacts, five musical artifacts, eight sewing artifacts, two writing artifacts, and three indeterminate tools and equipment artifacts (Table 3; Appendix A).

#### 3.4.6.1 Agricultural

Fourteen artifacts were found relating to agriculture at the Brady site (AlGq-83). These consist of one piece of barbed wire, three fence connectors, one harrow spike, and nine fence staples (Appendix A). The barbed wire fragment is intrusive as it was not patented until 1867 and did not become prevalent in Ontario until the late nineteenth century (Kenyon 1980).

#### *3.4.6.2 Animal Husbandry*

Animal husbandry items at the Brady site (AlGq-83) consist of one bolt harness strap, seven harness buckles, one long broken heel chain, four horseshoes, 110 horseshoe nails, one ox shoe, one saddle rivet, and one whippetree iron (Appendix A).

The harness straps are in a variety of shapes. Three are single bar buckles, two more are single bar common roller bucklers, one is a double bar halter buckle (Plate 18), and the last is only a small buckle fragment (Appendix A). It is interesting to note that the horseshoes come in two sizes, with one being especially thin and small suggesting that the Brady family either owned a small pony or a mare that produced an offspring. Further, the presence of an ox shoe suggests that oxen were also used for farm duties like pulling the plough.

Further, the site contains more horseshoe nails than what would have been expected on a farm. Generally, it is uncommon to find more than a handful of horseshoe nails on a typical Ontario farmstead. On the other hand, horseshoe nails are very common on blacksmith sites given that shoeing horses was one of the activities of the nineteenth-century blacksmith (Light 1987; Doroszenko and Light 1997). When an animal is shod, the nail is driven through the shoe and the hoof until it protrudes from the other side of the hoof. The nail is pulled downward to hold the shoe on the hoof and the excess is clipped off. The removal of old shoes leaves these clipped nails to lie together where the shoeing operation took place (Doroszenko and Light 1997). The presence of so many horseshoe nails at the Brady site suggests that the shoeing of horses and oxen was conducted on site, perhaps by a traveling blacksmith that occasionally visited the farm with his equipment and tools.

#### *3.4.6.3 Armament*

Out of the eight armament artifacts found at the Brady site, four are shell casings and one is a bullet, all from the twentieth century. The other three artifacts are gunflints (Plate 20). One of the gunflints is a glossy black gunflint, another is a light grey gunflint, and the last is a honey-coloured gunflint flake (Appendix A). The dimensions of the specimens indicate that the glossy black gunflint probably was from a pistol, while the grey gunflint was from a rifle (Kenyon 1982). The honey-coloured gunflint flake is too fragmentary to identify.

It has been previously observed that the origin of gunflints can be distinguished by their colour (Kenmotsu 1990). The dark gunflints like the pistol gun flint found at the Brady site come from Brandon in Suffolk County, northeast of London, England. Along with glossy black gunflints, the Brandon quarry produced opaque, gray with inclusions gunflints very similar to that of the rifle flint (Kelmotsu 1990:95). This is not particularly surprising given that most of the trade goods in Upper Canada were being imported from England at this time. What is interesting is that the honey-coloured translucent gunflint fragment is of a distinctly French origin. French gunflints dominated the North American market before 1790 and the outbreak of the Napoleonic Wars and the opening of the Brandon quarries in England (Kelmotsu 1990:96). It would appear that that gunflint was already fairly old when the site was inhabited or a rare import.

#### *3.4.6.4 General Tools*

There are 16 tools in the Brady site assemblage. These include 10 files, one pulley, one screw driver, one shovel, and three unidentified tools. Files from the site came in a variety of shapes including one cylindrical file, three flat files, and six files with a triangular cross section. Large amount of files are usually associated with blacksmithing activities (Light 1987; Doroszenko and Light 1997) and would have been used extensively in horseshoeing. The presence of so many files in the proximity of horseshoe nail clusters further suggests that a blacksmith periodically visited the farmstead to maintain the horseshoes on the horses.

One of the unidentified tools is a flat, triangular piece of metal with two holes at one end and a broken tip with sharpened edges on the other. Another unidentified tool has a triangular cross section, a thin convex blade edge, and a concave blade spine. Finally, the last unidentified tool is a small, tube-like object with a pointed grooved tip in one end. This artifact may have been used as part of the fire place as there is a great deal of mortar attached to the object.

#### *3.4.6.5 Hardware*

There are 149 hardware items in the Brady site assemblage. These consist of seven bolts, 14 chain links, one metal brace, two nuts, 21 screws, 15 spikes, 21 pieces of strapping, eight tacks, two washers, 56 wires, and two unidentified hardware items. One of the unidentified hardware items is a hand-wrought nail shank with a flat head and the other is an anchor-shaped metal fragment with one hole on each of the three ends (Appendix A).

#### *3.4.6.6 Musical*

The musical artifacts consist of five separate mouth harps (Plate 18). The mouth harp is a plucked idiophone that is capable of producing only one note. The harmonics of this note can be modified by altering the resonance patterns created by various shapings of the cavities of the mouth and tongue (Kenyon 1981). Two of the mouth harps are made of copper and three from iron. One mouth harp has a trianguloid frame, another has a small round frame, two have oval frames, and the last one is too fragmentary to identify the frame (Appendix A). Finding five different mouth harps suggests that the Brady site occupants enjoyed playing the instrument.

#### *3.4.6.7 Sewing*

The sewing artifact group consists of one bone handle from a crochet needle (Plate 20), three pairs of scissors, three straight pins, and one adult thimble (Plate 20) (Appendix A). Two of the scissors are complete embroidery scissors with flat bows, round top shank, and an elliptical blade cross section (Plate 20). The other pair of scissors is only a fragment with a flat bow and a thread neck bat shank, these too were probably used for embroidery (Beaudry 2006:126). It is highly unusual for the site to contain three pairs of scissors. Most families usually owned only one single multi-purpose pair (Beaudry 2006:133). Three pairs of scissors again suggests a certain degree of wealth on behalf of the family that could afford them.

#### *3.4.6.8 Writing*

The writing artifacts at the site are represented by two slate pencils (Appendix A).

#### *3.4.6.9 Indeterminate Tools and Equipment*

There are three indeterminate tools and equipment items which include a metal hook, a cog-like metal sheet with two semi-circular holes in the centre, and a metal cylinder with a flattened head (Appendix A).

### **3.4.7 Indeterminate Class**

At the Brady site (ALGq-83), 4.1 percent of the artifacts are unidentifiable (n=2,584) (Table 3; Appendix A). These consist of 254 indeterminate glass container fragments, 29 indeterminate metal container fragments, 169 indeterminate ceramic container fragments, 1,009 scrap metal fragments, and 1,123 miscellaneous items that could not be assigned to a functional class (Appendix A).

### **3.4.8 Pre-Contact Artifacts**

A total of 31 pre-contact artifacts were found at the Brady site. These consist of 28 lithics and three ground stone tools (Table 3; Appendix A). Half of the lithics (n=14) are from Onondaga chert, two are Bois Blanc, one is Haldimand, one is Lockport, four are Quartzite, three are Upper Bobcaygeon formation, and three are of unknown origin. The lithics are mostly comprised of debitage including one chunk, 15 pieces of shatter, two primary thinning flakes, four secondary knapping flakes, and one secondary retouch flake. The chunk, made from Upper Bobcaygeon formation chert, and one of the secondary knapping flakes, made from Onondaga chert, are retouched. Six pieces of shatter are thermally altered (Appendix A).

Five formal tools were also found including one biface, three projectile points, and one drill (Plate 21). The biface is a late stage ovate biface with a thin base. It is made from Onondaga chert and is 52 mm long, 39 mm wide, and nine mm thick. One of the points is a midsection fragment made from Bois Blanc and is nine mm long, 20 mm wide, and five mm thick. Another projectile point is a blade portion of a possible Early Archaic Nettling point. The blade is 28 mm long, 31 mm wide, and seven mm thick and made from Onondaga; the tip is missing, and the base is broken at the shoulders. There are slight lateral serrations on the edge. The last point is also a blade portion with broken shoulders that is made from Onondaga chert. It is a notched point with collateral flaking and heavy lateral retouch that created a serrated margin. In size, it is 52 mm long, 25 mm wide, and eight mm thick. This also may be possibly an Early Archaic Nettling point. The drill is narrow, made from Onondaga chert, bifacially worked, and contains a bevelled side. It is 43 mm long, 18 mm wide, and seven mm thick (Appendix A).

The three ground stone artifacts are comprised of three slate gorget fragments that mend with each other. Together, they comprise approximately half of a rectanguloid slate gorget. One of the fragments exhibits a biconically-drilled suspension hole. The observe and reverse faces are highly polished and both faces bear multiple areas of overlapping scratches and scoring (Plate 21). These gorget fragments probably date back to the Early or Middle Woodland period (Appendix A).

The pre-contact component from the Brady site (AlGq-83) does not exhibit a densely concentrated cluster and so would not represent an Aboriginal camp site (Figures 2 and 3). Rather, it is probable that the artifacts accumulated over millennia of sporadic visitations by the Aboriginal people hunting and fishing in the proximity of the Brady site.

It is interesting to note however, that the largest gorget fragment was found in Feature 1, located 15 metres away from the other two gorget fragments found in units 490N-303E and 492N-306E (Appendix A). It seems unlikely that the gorget fragment was moved that far by plough activity. Rather, given its large size, polished edges, and a well defined hole, it could have been collected as a curiosity and brought to the house by its Euro-Canadian inhabitants where it eventually found its way into the feature fill.

#### **4.0 ANALYSIS AND CONCLUSIONS**

The Stage 4 mitigative excavation of the Brady site (AlGq-83) was carried out to document the site prior to the construction of a new nuclear power generating station. It began with the extensive block excavation of the midden in the plough zone, which was undertaken with the understanding that relatively early Euro-Canadian sites do not contain many artifact-bearing subsurface features (Poulton and Dodd 2007). In the Stage 4, 462 one-metre square units were block excavated until the artifact count dropped below 90 or the excavations were stopped by the steep slope on the eastern edge of the site or the OPG mandated buffer next to the perimeter fence on the southern edge of the site. Afterward, approximately 2,000 square metres of topsoil was stripped by a Gradall revealing four cultural features. All of the features were 100 percent excavated. This produced a total of 63,602 Euro-Canadian and pre-contact artifacts.

The Brady site (AlGq-83) is located on part of Lot 18, Broken Front Concession in the geographic Township of Darlington. Darlington Township was slow to develop as originally the land was granted to absentee owners connected to the governing elite at York. Establishment of good infrastructure was slow and the earliest settlements were located near the lake. It was not until the 1830s that extensive settlement of the township took place after improvements to the local infrastructure.

The results of the Stage 4 salvage excavation of the Brady site significantly helps further the understanding of this Euro-Canadian homestead. The Brady site is relatively early. The distribution of a large numbers of ceramics like creamware and pearlware as well as other datable items like hand-wrought nails and coins in the plough zone suggest that the site contains a possible short-lived shanty component related to an attempt by John Tucker Williams to establish a homelot on Lot 18 after he purchased it in 1821. This cannot be confirmed using the assessment roll data as the lot and concession of a given property was not recorded until 1822. However, the artifact distribution does point to an occupation not fully recorded previously.

The process of bringing the land on Lot 18 into agricultural production was started in earnest sometime after 1825 when 75 acres were severed from the 250-acre lot and sold to Prudence Price. Before that time, the settlement activity was concentrated on Lot 19. It was not until the 1835 assessment that the portion of the lot known as the “west three-quarters,” which included the extreme south end of the lot where the Brady site (AlGq-83) is located, was distinguished from the rest of the lot. This assessment was the first one to note that two farming operations were extant on the lot, those of Nehemiah Price and Peter Brady. Thus a new domestic structure containing a root cellar was established in the 1830s by the Brady family on Lot 18.

In 1837, the distinction began to be made between the north and south parts of Lot 18. In that assessment, Isaac Metcalf occupied 120 acres on the north part, none of which were cultivated, while John Tait occupied 100 acres on the south part, 35 acres of which were cultivated. Presumably Tait took over the arable land on Price's and Brady's farms, while Metcalf started a new operation. Thomas Hawk was listed as the tenant of the southern farm in 1839. Peter Brady returned to Lot 18 in 1842 and purchased 65 acres. In 1860, Peter Brady sold this land and it was incorporated into a larger 115-acre farm. Given the presence of only a few pieces of ironstone and lacking many diagnostically mid-nineteenth century artifacts like flow and sponged ceramics and prosser buttons, the site cannot date much past the mid-1840s. It is likely that it was abandoned long before Peter Brady sold the land to William Poley, and that Brady constructed a new house in a different location when he returned to Lot 18 in 1842.

For its time, the Brady site represents a frontier farmstead in a township that was being slowly developed through the acquisition of lands from its absentee landlords. When Euro-Canadian settlement at the Brady site began, good infrastructure was only starting to be constructed in the township. Thus, it is not surprising that the Brady site is located near the water which would have allowed easy water access to the rest of the province, especially the near-by growing commercial, cultural, and political capital of York.

The bricks recovered from the site, probably from the hearth, represent a jumble of different hand-made bricks of various sizes, colours, and consistencies that had to be derived from various manufacturers. They paint an interesting picture about the conditions of somebody trying to build a home in Darlington Township during the 1830s. Bricks may have been scarce in the province and could not be purchased wholesale from a manufacturer. Instead, the bricks were acquired piecemeal from several sources regardless of the quality.

The framing inside the cabin was originally fastened together with hand-wrought nails and later refurbished with machine cut nails. The distribution of nails and window glass in the plough zone suggests that two framed buildings without windows or a subsurface component were located east of the domestic structure that contained the root cellar. These framed buildings were not contemporaneous with each other and one may represent a small auxiliary farm structure, while the other may represent a shanty occupied briefly in the 1820s.

South of the dwelling is the archaeological footprint of the midden and main activity area of the household. Considering that from the eighteenth century onward most of the refuse from pioneer households was deposited behind the house (King 1988:26; MacDonald 1997:60), it is probable that the farmhouse was facing either northward or westward.

Ceramics comprise an overwhelming majority of the artifacts found in the plough zone as is typical for kitchen middens on Euro-Canadian sites in Ontario (MacDonald 1997:Table 4). These would have been deposited from the cooking and dining activities taking place in the main building. Interestingly, the earliest ceramics like pearlware and creamware do not cluster in same area as do later ceramics like refined white earthenware. This archaeological phenomenon is called a "midden shift" and has previously been identified on other historic sites (Groover 2003, 2008). While the exact reason for the midden shift is unknown, it occurs as a result of household succession when a new occupant or new head of the family takes over the farmstead and the landscape undergoes rapid change, possibly as a way of reinforcing the new owner's authority over the farm. Considering that the Brady family was not present on the property between 1837 and 1841, the relatively later material was discarded in the midden by the tenants who resided in the house during that time. Beyond this, the later ceramics appear to be more diffusely scattered than the earlier ones and may represent a more cluttered yard during the later stage of the farm's occupancy.

It is interesting to note that the kitchenwares occupy a very dense area directly south of Features 3 and 4. Given that stoneware and coarse red earthenware was the primary ceramic for dairy processing in Ontario in the nineteenth century, this pattern may represent a dairying activity area.

The faunal remains suggest that the site's occupants made a conscious effort to discard the food leftovers further away from the main dwelling area. Most of the bone remains found in the plough zone are located on the eastern and southern peripheries of the site in the area where the ground starts to slope downward. This has been previously observed elsewhere and represents a deliberate effort to dispose food waste some distance from the residence (Poulton and Dodd 2007:52), probably to mitigate the smell. Some of the faunal remains do share the same vicinity as the ceramic concentrations and could be the result of food waste being thrown away with the broken dishes.

Finally, the cluster of artifacts between Feature 1 and Feature 2 needs to be explained. As seen from the spatial analysis the tight cluster is comprised of early and late ceramics, a little bit of kitchenware and faunal remains, and architectural items in the form of nails and window glass. These could simply be the result of destruction of the farmhouse where the household items and architectural beams were piled as the building was being demolished.

From the artifacts recovered in the middens and the features, it can be seen that despite the site's seeming isolation it was remarkably connected to the outside world. This was probably achieved through easy access to water transportation. For one, the site contains coins and tokens from three different countries and four different provinces linking it to the global commercial network that was flourishing at this time. The occupants of the Brady site were linked to the wider world through owning ceramics from England, China, and Upper Canada, gunflints from France, and cod from the Maritimes. The relatively early oil lamp suggests easy access to a port which linked the coastal sources of whale oil with Ontario through the St. Lawrence River. Even a tin can, a crude and expensive way of storing food before the 1840s, was found in the assemblage and represents the family's close connection to the growing industrialized market.

The occupants of the Brady site were relatively wealthy as seen by their preference for more ornately decorated ceramics. The same can also be said of the clothing items like the intricate cuff link and ornate buttons from expensive clothes. The reason for this wealth is unknown. Perhaps the farm's residents were more successful in developing their lands than their contemporaries. Otherwise, their close proximity to the main commercial routes via the lake provided them with an opportunity to buy more and better quality goods than their contemporaries.

Other artifacts help further the understanding of the day to day life of the site's inhabitants, their background, and their interests. Based on the faunal remains recovered from the features at the Brady site, the family primarily consumed domestic animals. Cows, sheep, and pigs are all represented in the faunal assemblage. Most of the identifiable mammal bones are from pigs, an animal that seems to be a favourite for frontier sites (Groover 2008). Fowl in the form of geese, ducks, turkeys, and chickens comprised the second largest faunal group. Wild animals are hardly represented even though the gunflints suggest that the family owned several guns. Fish from local and Atlantic commercial fisheries was imported and fresh water fish could have been acquired from fishing the local streams and rivers.

Other artifacts add details about the inhabitants' lives. For instance, the eye glasses lens suggests that one of the occupants had trouble seeing. Music, especially by means of mouth harps, was an integral part of the family life as five individual mouth harps were identified. The family also owned at least two sizes of horses and the abundance of horseshoe nails and files would suggest that a blacksmith visited the site regularly to perform horseshoeing. Finally, the military button is intriguing but it is unknown where it

came from. It could be that one of the site's occupants served in the 41<sup>st</sup> Regiment of Foot during the War of 1812, though there are many other ways the button would have ended up in the assemblage, as they are not uncommon on domestic sites (Kenyon 1984).

In summary, the Stage 4 mitigative excavation of the Brady site (AIGq-83) resulted in the identification, documentation, and controlled excavation of four cultural features, 2,000 square-metres of plough zone, and the collection of 63,602 Euro-Canadian and pre-contact artifacts. The site represents an early and very interesting Euro-Canadian site that represents a fairly affluent frontier home that was linked to the global market by the near-by Lake Ontario. The Brady site (AIGq-83) is a valuable cultural resource and its excavation furthers the understanding of the earliest settlement and rural life in Darlington Township.

This report is written as per the 2010 licensing agreement with the Ministry and the statements contained on CIF P315-029-2010. This report supersedes a preliminary executive summary filed by ASI with MTC on January 6, 2011. It was concluded that the Stage 4 mitigative excavation of the Brady site (AIGq-83) was complete and there was no further archaeological concern. In a letter dated January 19, 2011 the Ministry concurred that the provincial interest in the Brady site (AIGq-83) had been addressed and was satisfied that the concerns for impacts to the archaeological site had been met in the development area.

## 5.0 RECOMMENDATIONS

Given the preceding information, it is concluded that:

1. The Brady site (AIGq-83) has been sufficiently excavated and documented, and no further concerns exist for this archaeological site.

NOTWITHSTANDING the results and recommendations presented in this study, Archaeological Services Inc. notes that no archaeological assessment, no matter how thorough or carefully completed, can necessarily predict, account for, or identify every form of isolated or deeply buried archaeological deposit. In the event that archaeological remains are found during subsequent construction activities, the consultant archaeologist, approval authority, and the Cultural Programs Unit of the Ministry of Tourism Culture should be immediately notified.

The above recommendations are subject to Ministry approval and it is an offence to alter any archaeological site without Ministry of Tourism and Culture concurrence. No grading or other activities that may result in the destruction or disturbance of any archaeological sites are permitted until notice of MTC approval has been received.

## 6.0 ADVICE ON COMPLIANCE WITH LEGISLATION

In addition, the following advice on compliance is provided:

- This report is submitted to the Minister of Tourism and Culture as a condition of licensing in accordance with Part VI of the Ontario Heritage Act, RSO 1990, c 0.18. The report is reviewed to ensure that it complies with the standards and guidelines that are issued by the Minister, and that the archaeological field work and report recommendations ensure the conservation, preservation and protection of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been

addressed to the satisfaction of the Ministry of Tourism and Culture, a letter will be issued by the ministry stating that there are no further concerns with regard to alterations to archaeological sites by the proposed development.

- It is an offence under Sections 48 and 69 of the Ontario Heritage Act for any party other than a licensed archaeologist to make any alteration to a known archaeological site or to remove any artifact or other physical evidence of past human use or activity from the site, until such time as a licensed archaeologist has completed archaeological field work on the site, submitted a report to the Minister stating that the site has no further cultural heritage value or interest, and the report has been filed in the Ontario Public Register of Archaeology Reports referred to in Section 65.1 of the Ontario Heritage Act.
- Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48 (1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed consultant archaeologist to carry out archaeological fieldwork, in compliance with sec. 48 (1) of the Ontario Heritage Act.
- The Cemeteries Act, R.S.O 1990 c. C.4 and the Funeral, Burial and Cremation Services Act, 2002, S.O. 2002. c.33 (when proclaimed in force) require that any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Consumer Services.
- The documentation related to this archaeological assessment will be curated by Archaeological Services Inc. until such a time that arrangements for their ultimate transfer to Her Majesty the Queen in right of Ontario, or other public institution, can be made to the satisfaction of the project owner(s), the Ontario Ministry of Tourism and Culture, and any other legitimate interest groups.
- Archaeological sites recommended for further archaeological field work or protection remain subject to Section 48(1) of the Ontario Heritage Act and may not be altered, nor may artifacts be removed from them, except by a person holding an archaeological license.

Plate 12: Feature 4, north profile.

**Plate 13: Architectural and Furnishing items. Top. Left, padlock (Cat. #20339); right, chest key (Cat. #20451). Bottom, chest lock (Cat. #20452).**

**Plate 14: Teawares. Top. Left, hand-painted late-palette refined white earthenware teapot spout (Cat. #20267); centre, spatterware refined white earthenware London teacup (Cat. #1571); right, hand-painted late-palette refined white earthenware mug (Cat. #20622). Bottom. Left, spatterware refined white earthenware saucer (Cat. #20402); centre, red transfer printed refined white earthenware saucer with scalloped rim (Cat. #9200); right, hand-painted late-palette refined white earthenware saucer (Cat. #20633).**

**Plate 15: Bowls. Top. Left, hand-painted late-palette refined white earthenware bowl (Cat. #20382); right, factory-slip decorated creamware bowl (Cat. #10737). Bottom. Left, hand-painted monochrome blue pearlware bowl (Cat. #20764); right, factory-slip earthworm decorated refined white earthenware bowl (Cat. #20647).**

**Plate 16: Flatwares. Top. Left, pearlware blue scalloped edgeware muffin plate (Cat. #20249); right, refined white earthenware green scalloped edgeware meat dish (Cat. #20597). Bottom. Left, canary wear moulded and hand-painted child's plate (Cat. #20243); right, refined white earthenware black Blue Willow supper plate with a gently scalloped rim (Cat. #20413).**

Plate 17: Utensils. Far left, lead serving spoon (Cat. #20455); centre left, thin and light tea spoon (Cat. #20453); centre right, concave table knife with a bone handle (Cat. #20674); far right, two pronged fork with a bone handle (Cat. #20457).

Plate 18: Miscellaneous personal and tools and equipment artifacts. Top. Left, cuff link (Cat. #11711), centre, eye glass lens (Cat. #20647); right, blue bead (Cat. #9844). Centre. Left, Broke 1814 token (Cat. #2611), centre, token with a nail hole (Cat. #20527); right, Georgius III 1822 coin (Cat. #6267). Bottom. Left, double bar horse harness buckle (Cat. #5111); centre, copper mouth harp (Cat. #4835); right, clasp knife (Cat. #439).

**Plate 19: Buttons.** Top. Far left, large metal coat button (Cat. #20528); centre left, 41<sup>st</sup> Regiment of Foot button (Cat. #20450); centre right, shell button with a metal rim (Cat. #7664); far right, blue glass button (Cat. #16921). Middle. Left, four-holed underwear button (Cat. #20438); centre, three-holed toy's or children's button (Cat #20327); right, one-holed bone button back (Cat. #6687). Bottom. Far left, plain metal coat button (Cat. #20532); centre left, cuff button (Cat. #9279); centre right, four-holed suspender button (Cat. #18470); far right, ornate waist coat or vest button (Cat. #2866).

**Plate 20: Miscellaneous armaments and sewing items.** Top. Far left, French gunflint fragment (Cat. #15430); centre left, English grey rifle gunflint (Cat. #20706); centre, English pistol gunflint (Cat. #12219); centre right, bone handle of a crocheting needle (Cat. #12736); far right, adult thimble (Cat. #19100). Bottom, embroidery scissors (Cat. #8610).

**Plate 21: Pre-contact artifacts. Top. Left, Onondaga biface (Cat. #L11); centre, Onondaga Nettling Point fragment (Cat. #L14); right, Onondaga Nettling Point (Cat. #L16). Bottom. Left, slate gorget (Cat. #G1); right, Onondaga drill (Cat. #23).**

## Lithics - Brady site (AIGq-83)

Cat #	Unit	Feature	Quadrant	Qty	Type	Material	Therm. Alt.	Retouch/ Utilized	L	W	T	Comments
L2	466-288			1	SH - Shatter	Unknown						
L3	466-290			1	SH - Shatter	Unknown	Yes					
L4	467-295			1	SH - Shatter	Upper Bobcaygeon formation						
L5	467-295			1	SH - Shatter	Quartzite						distal flake frag.?
L6	468-294			1	SK - Secondary knapping flake	Quartzite						
L7	478-284			1	SH - Shatter	Upper Bobcaygeon formation						
L8	480-307			1	SH - Shatter	Onondaga						
L9	481-300			1	SH - Shatter	Onondaga						
L10	481-305			1	CH - Chunk/Cobble	Upper Bobcaygeon formation		Yes				water-worn chunk, battered edges, retouch on 1 edge
L11	482-301			1	B - Biface	Onondaga			52	39	9	late stage ovate biface, thinned base
L12	482-306			1	SH - Shatter	Onondaga						
L13	483-297			1	PT - Primary thinning flake	Lockport						
L14	483-307			1	PPf - Projectile point fragment	Onondaga			28	31	7	blade portion, missing tip and base broken at shoulders, prob. corner-notched pt.; slight lateral serration suggesting poss. Early Archaic Nettling pt.;
L15	484-302			1	SH - Shatter	Onondaga	Yes					
L16	485-287			1	PPf - Projectile point fragment	Onondaga			52	25	8	blade portion broken at shoulders, notched pt. w collateral flaking and heavy lateral retouch creating serrated margin, poss. Early Archaic Nettling pt.?
L17	485-291			1	SK - Secondary knapping flake	Haldimand						
L18	485-303			1	SH - Shatter	Onondaga	Yes					
L19	486-299			1	SR - Secondary retouch flake	Onondaga						
L20	486-299			1	SH - Shatter	Onondaga	Yes					
L21	488-295			1	SK - Secondary knapping flake	Onondaga						
L22	489-298			1	PPf - Projectile point fragment	Bois blanc			9	20	5	midsection frag.
L23	489-306			1	D - Drill	Onondaga			43	18	7	narrow, bifacial perforator/drill; beveled side
L24	491-308			1	SH - Shatter	Quartzite						
L25	493-306			1	PT - Primary thinning flake	Onondaga						
L26	493-306			1	SH - Shatter	Unknown	Yes					
L27		1	1	1	SH - Shatter	Bois blanc	Yes					
L28	485-295			1	SK - Secondary knapping flake	Onondaga		Yes				lateral and distal ret./ utiliz.
L29	465-295			1	SH - Shatter	Quartzite						distal flake frag.?

**Groundstone Catalogue, Brady site (AIGq-83)**

<b>Cat #</b>	<b>Layer</b>	<b>Unit</b>	<b>F</b>	<b>Layer</b>	<b>Quad</b>	<b>Qty</b>	<b>Material</b>	<b>Type</b>	<b>Portion</b>	<b>Comments</b>
G1			1	fill	2	1	Slate	Gorget	Half	mends with G2 and G3, approximately half of a rectanguloid slate gorget, preserving one biconically-drilled suspension hole, highly polished obverse and reverse faces and edges (where in tact), both faces bear multiple areas of overlapping scratches and scoring, dates to the Early or Middle Woodland Period
G2	pz	490-303				1	Slate	Gorget	Bit	mends with G1 and G3
G3	pz	492-306				1	Slate	Gorget	Bit	mends with G1 and G2

## APPENDIX B: SUPPLEMENTARY DOCUMENTATION

**Table B - 1: Material Curated by ASI from the Brady (ALGq-83) site**

<b>Project:</b>	Stage 4 Mitigative Excavation of the Brady Site (ALGq-83) New Nuclear – Darlington Environment Assessment Regional Municipality of Durham, Ontario		
<b>ASI File:</b>	09EA-01	<b>MTC PIF:</b>	P315-029-2010

Document/Material	Location	Comments
Written field notes, annotated field maps, GPS logs, one-metre excavation forms, Field Photography (Digital)	Archaeological Services Inc., 528 Bathurst Street, Toronto, ON M5S 2P9	Stored on ASI network servers and/or CD-ROM
Research/Analysis/Reporting Materials (Various Formats)	Archaeological Services Inc., 528 Bathurst Street, Toronto, ON M5S 2P9	Hard copy and/or digital files stored on ASI network servers and/or CD-ROM
Artifacts	Archaeological Services Inc., 528 Bathurst Street, Toronto, ON M5S 2P9	63,602 Euro-Canadian and pre-contact artifacts stored in 30 boxes.  All material stored in standard banker's boxes by class and provenience. Collection may be transferred to one of ASI's secure, off-site storage facilities if deemed necessary.

The documentation and materials related to this project will be curated by Archaeological Services Inc. until such a time that arrangements for their ultimate transfer to Her Majesty the Queen in right of Ontario, or other public institution, can be made to the satisfaction of the project owner(s), the Ontario Ministry of Tourism and Culture, and any other legitimate interest groups.
